

JEDEC STANDARD

Standard Manufacturer's Identification Code

JEP106BM

(Revision of JEP106BL, February 2025)

June 2025

JEDEC SOLID STATE TECHNOLOGY ASSOCIATION

NOTICE

JEDEC standards and publications contain material that has been prepared, reviewed, and approved through the JEDEC Board of Directors level and subsequently reviewed and approved by the JEDEC legal counsel.

JEDEC standards and publications are designed to serve the public interest through eliminating misunderstandings between manufacturers and purchasers, facilitating interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining with minimum delay the proper product for use by those other than JEDEC members, whether the standard is to be used either domestically or internationally.

JEDEC standards and publications are adopted without regard to whether or not their adoption may involve patents or articles, materials, or processes. By such action JEDEC does not assume any liability to any patent owner, nor does it assume any obligation whatever to parties adopting the JEDEC standards or publications.

The information included in JEDEC standards and publications represents a sound approach to product specification and application, principally from the solid state device manufacturer's viewpoint. Within the JEDEC organization there are procedures whereby a JEDEC standard or publication may be further processed and ultimately become an ANSI standard.

No claims to be in conformance with this standard may be made unless all requirements stated in the standard are met.

Inquiries, comments, and suggestions relative to the content of this JEDEC standard or publication should be addressed to JEDEC at the address below or refer to www.jedec.org under Standards and Documents for alternative contact information.

STANDARD MANUFACTURER'S IDENTIFICATION CODE

(From JEDEC Board Ballot JCB-94-02 formulated under the cognizance of JC-42.3 Subcommittee on RAM Memories).

1 Intent

The intent of this identification code is that it may be used whenever a digital field is required e.g. hardware software documentation etc.

2 Scope

The manufacturer's identification code is defined by one or more eight (8) bit fields each consisting of seven (7) data bits plus one (1) odd parity bit. It is a single field limiting the possible number of vendors to 126. To expand the maximum number of identification codes a continuation scheme has been defined. The code 7F as shown in Table 1 indicates that the manufacturer's code is beyond the limit of this field and the next sequential manufacturer's identification field is used. Multiple continuation fields are permitted and when used shall comprise of the identification code.

3 Manufactures Identification Codes

The manufacturer's identification code as shown in Table 1 is assigned, maintained and updated by the JEDEC office. The identification code list is not a fixed listing. Any company can be added to the list by making a request to the JEDEC office at <http://www.jedec.org/standards-documents/id-codes-order-form> or by calling (703) 907-7540. Updates to the list will be made periodically and Table 1 will be modified accordingly.

The present list is complete as of June 12, 2025.

Table 1 — Manufacturer's Identification Code

COMPANY	8	7	6	5	4	3	2	1	HEX
1 AMD	0	0	0	0	0	0	0	1	01
2 AMI	0	0	0	0	0	0	1	0	02

Q1 = LSB Q8 = Parity bit

NOTE 1 Hex is derived from the binary after the parity bit is added. Binary is derived from the decimal.

NOTE 2 Number 126 is the last number permitted in bank five.

The following numbers are all in bank six:

COMPANY	8	7	6	5	4	3	2	1	HEX
Continuation Code	0	1	1	1	1	1	1	1	7F

Q1 = LSB Q8 = Parity bit

NOTE 1 Hex is derived from the binary after the parity bit is added. Binary is derived from the decimal.

NOTE 2 Number 126 is the last number permitted in bank seven.

The following numbers are all in bank eight:

COMPANY	8	7	6	5	4	3	2	1	HEX

Q1 = LSB Q8 = Parity bit

NOTE 1 Hex is derived from the binary after the parity bit is added. Binary is derived from the decimal.

NOTE 2 Number 126 is the last number permitted in bank nine.

The following numbers are all in bank 10:

COMPANY	8	7	6	5	4	3	2	1	HEX

Q1 = LSB Q8 = Parity bit

NOTE 1 Hex is derived from the binary after the parity bit is added. Binary is derived from the decimal.

NOTE 2 Number 126 is the last number permitted in bank eleven.

The following numbers are all in bank 12:

COMPANY	8	7	6	5	4	3	2	1	HEX
Continuation Code	0	1	1	1	1	1	1	1	7F
